While there are easy hikes, some are far from it. For example, one hike is nine miles long with a 1200-foot climb while another is over 14 miles long. Fortunately, the distances and elevation changes are clearly marked in the description so it is easy to select those you are willing and able to tackle while leaving the others for the more adventurous. There are also maps for each hike but it sometimes took me a while to use them. The actual trail wasn't always well defined within the larger area portrayed on the map and I often found the trailheads especially difficult to spot. It was not a major problem as I always worked it out in the end but it is an area that could use a bit of improvement. There are 28 hikes listed and they are broken down into 5 geographic areas of the two parks. My wife and I did 2-3 hikes from each area and found the descriptions to be both helpful and largely accurate. The book is small enough to easily fit in a hip pocket and held up very well during a full week of heavy usage. Color photos would have been a nice addition but that would have made the book both larger and heavier which is not ideal for a pocket guide. Overall, this was a great purchase at an extremely reasonable price. 20 of 21 people found the following review helpful. Basically just a well organized compendium of the free park literatureBy James PineFor less than ten dollars, one would be hard pressed to call this a waste of money, as it does provide a great deal of information on 28 different hikes throughout the park. That said, it doesn't provide much more information than the one can pick up at any of the ranger stations, [...]. Its main advantage is organization, as you're not futzing around with a bunch of double sided pieces of paper and several newsletters, trying to figure out which hike to go on and how to get there. 0 of 0 people found the following review helpful. ok. Overall, however, The Moon Guide was our clear resource throughout the trip.

Twenty-five hikes in Montana and Alberta.
