**Larry Vardiman : Over the Edge: Thrilling Real-Life Adventures in the Grand Canyon** before purchasing it in order to gage whether or not it would be worth my time, and all praised Over the Edge: Thrilling Real-Life Adventures in the Grand Canyon:

I was afraid the funny stories would turn out to not translate well to text ("Well, I guess you had to be there"). The book is fun light reading, interspersed with casual discussion of the geology and formation of Grand Canyon layers and the canyon itself, and of the Anasazi who lived there and the artifacts that remain. Not to give any spoilers, but the sketch and story from the chapter titled "From Here You Can Be Seen Forever" is a hoot, as are the stories of hapless newbie hikers carting along everything from canned foods to crowbars to a hair dryer. ;-)-Makes me look forward to taking a tour with ICR someday. I've known a couple who visited Mt. St. Helens with them and they really enjoyed it.0 of 3 people found the following review helpful. Aptly titledBy P. S. BratermanI have seen the Grand Canyon, gazed down through its many rock layers, and stared in awe at the Great Unconformity at its base, taking me from a mere 525 million years ago, to 1,200 million years before that.Anyone who would prefer to believe that it was carved by the waters of a mythical Middle Eastern flood is indeed "over the edge". Anyone who misuses the great religious writings as scientific texts has no understanding of either science or religion.

What started as informal treks to the awesome splendor of the Grand Canyon by members of the Institute for Creation Research has grown into a popular excursion for many across the country, from all backgrounds. Dr. Larry Vardiman recounts his memorable trips to this "evidence for a worldwide flood," as he leads groups of adventurous tourists up and down the craggy cliffs. Written with humor, this book also points to a reverence for God's Word. By balancing the rugged beauty of this immense canyon with an acknowledgement of past judgment, Vardiman presents a complete picture of our natural surroundings.

About the AuthorVardiman has conducted research for the U.S. Air Force, Colorado State University, the Department of Interior, and the Institute for Creation Research in the field of cloud physics and climate change for thirty-five years.
